## Start Your Own Garden and Save

*Grow your own healthy food in your backyard*

Warmer temperatures in February have Kelowna residents chortling about an early spring. That means it's time to plant the flowers that you want to stop and smell. This year why not take a step further and create your own vegetable garden? It's a little extra work but it can ultimately cut down your grocery bill while you benefit from quality time with Mother Nature.

Here are a few tips to get your green thumb started:

#### 1) Soil matters

The attention you pay to your soil can greatly influence the quality of the crop. Take time to sift out of the soil as many rocks as possible before starting to plant. You can find soil sifters at most hardware stores but there are also tutorials online to help you easily build one for around \$10. It is hard work to sift an entire garden plot but the rewards outweigh the cost.

#### 2) Compost!

Speaking of soil quality, a great way to enhance yours is to compost your vegetable and fruit waste, teabags, plant prunings and grass cuttings. It's good for the environment and is also a way to cultivate better soil as it provides needed nitrogen and moisture.

#### 3) Timing is everything

Different veggies need to be planted at different times in order to flourish. Some you might want to start indoors before transplanting them to your garden later. For example, you should start broccoli, lettuce and cauliflower as soon as possible (last week of February) and then transplant them in later March. Some vegetables you won't want to plant until the summer such as pumpkins, cucumbers and beans. Others should be planted in April or May. You can find a full list online, specifically tailored to Kelowna's climate.
